PROFILE

Full stack software engineer with extensive experience in frontend applications with a focus on React, JavaScript (TypeScript) backends, and payment systems

EXPERIENCE

Currency Capital | Full Stack Software Engineer   MAR 2019 - Present

- Currently working on internationalizing customer onboarding by rearchitecting the existing financing app using Next.js, TypeScript, and Redux
- Built a scalable solution supporting different payment types for high-value items using Test Driven Development using React, Typescript, Jest, and Mabl , leading to consistent, dependable product deliveries
- Participated in developing a monorepo including a UI library increasing the team's productivity by **300%**+ leading to an increase from $40,000,000 in transaction volume to $70,000,000 in transactions volume per month
- A proven force multiplier mentoring Currency test engineers to becoming full stack engineers

OPEN SOURCE

GraphnomiQL

- Developed application with Electron and React that enables users to visualize, edit, and export updates of their GraphQL schema

EDUCATION

Codesmith | *Coding Bootcamp*   2019

- 3 month software engineering boot camp where I found excitement in mentoring fellow colleagues in solidifying their understanding on full stack technologies

University of California, Santa Barbara | *B.S. Financial Math and Stats*   2018

- First taste in engineering through linear algebra and statistic courses by using python to plot, analyze, and optimize data

INTERESTS

Exploring new places, trying new food, basketball, Call of Duty, EDM, reminding people that my last name is not Parse
